Geochim. et Cosmochim. Acta

CONTENTS

Nos. 1/2

E. L. Horstman: The distribution of lithium, rubidium, and caesium in igneous and sedimentary rocks 1
Morna Mathias: The geochemistry of the Messum Igneous Complex, South-West Africa 29
E. Hellner and R. Euler: Hydrothermale und röntgenographische Untersuchungen an gesteinsbildenden Mineralen—I. Über ein geologisches Thermometer auf Grund von Untersuchungen an Biotiten 47
John W. Winchester and A. H. W. Aten, Jr.: The content of tin in iron meteorites . 57
Konrad B. Krauskopf: Separation of manganese from iron in sedimentary processes . 61
Anthony P. Millman: Biogeochemical investigations in areas of copper-tin mineralization in south-west England 85
G. Deleon and L. H. Ahrens: The distribution of Li, Rb, Cs, and Pb in some Yugoslav granites 94
Thomas Hoering: The isotopic composition of the ammonia and the nitrate ion in rain 97
E-an Zen: Partial molar volumes of some salts in aqueous solutions 103
Go Okamoto, Takeshi Okura, and Katsumi Goto: Properties of silica in water . . 123
Harmon Craig: Isotopic standards for carbon and oxygen and correction factors for mass-spectrometric analysis of carbon dioxide 133
Hitoshi Sakai: Fractionation of sulphur isotopes in nature 150
Geochemical Note:
B. M. Gordon, L. Friedman, and G. Edwards: Caesium in stony meteorites . . 170
Some Current Papers in Other Journals 172
Book Review:
"The Chemistry and Fertility of Sea Water" by H. W. Harvey (reviewed by Dayton E. Carritt) 176

No. 3

John H. Reynolds: Comparative study of argon content and argon diffusion in mica and feldspar 177
K. I. Mayne: Natural variations in the nitrogen isotope abundance ratio in igneous rocks 185
J. R. Butler: Rare earths in yttrotungstite 190
P. G. Harris: Zone refining and the origin of potassic basalts 195
H. R. Cornwall and H. J. Rose, Jr: Minor elements in Keweenawan lavas, Michigan . 209
Royal R. Marshall: Isotopic composition of common leads and continuous differentiation of the crust of the earth from the mantle 225
John F. Lovering: Differentiation in the iron-nickel core of a parent meteorite body . 238
John F. Lovering: Pressures and temperatures within a typical parent meteorite body 253
Hiroshi Onishi and E. B. Sandell: Meteoritic and terrestrial abundance of tin . . 262
Geochemical Note:
Sol Berman: Determination of yttrium, lanthanum, cerium, neodymium, and ytterbium in test samples granite G–1 and diabase W–1 by a combined chemical-spectrochemical technique 271
Abstracts from Current Literature . .
A. P. Vinogradov, A. B. Ronov, and V. M. Ratynskii: Variation in the chemical composition of carbonate rocks of Russian platform 273

FRIEDRICH BEGEMANN and W. F. LIBBY: Continental water balance, ground water inventory and storage times, surface ocean mixing rates and world-wide water circulation patterns from cosmic-ray and bomb tritium 277

SVEN GAVELIN: Variations in isotopic composition of carbon from metamorphic rocks in northern Sweden and their geological significance 297

F. J. FLANAGAN: Semi-quantitative spectrographic analysis and rank correlation in geochemistry 315

W. GENTNER und W. KLEY: Argonbestimmungen an Kaliummineralien—IV. Die Frage der Argonverluste in Kalifeldspäten und Glimmermineralien 323

J. H. REYNOLDS and J. I. LIPSON: Rare gases from the Nuevo Laredo Stone meteorite . 330

HIROSHI HAMAGUCHI, GEORGE W. REED, and ANTHONY TURKEVICH: Uranium and barium in stone meteorites 337

Letters to the Editor:

V. I. LEBEDEV and N. V. BELOV: Chemical energy and metamorphism 348

V. A. SAULL: Chemical energy and metamorphism (Reply to letter from V. I. LEBEDEV and N. V. BELOV) 349

Some Current Papers in Other Journals 350

Book Reviews:

"Gmelins Handbuch der anorganischen Chemie" 8 Auflage (reviewed by C. W. CORRENS) 351

"Principles of Engineering Geology and Geotechnics" by D. KRYNINE and W. R. JUDD (reviewed by BRYAN O. SKIPP) 351

DR. E. INGERSON *Geochemistry and Petrology Branch, U.S. Geological Survey, Washington 25, D.C., U.S.A.*

DR. S. R. NOCKOLDS *Department of Mineralogy and Petrology, The University, Cambridge, England*

PROF. F. A. PANETH, F.R.S. *Max-Planck-Institut für Chemie, Mainz, Saarstrasse 23, Germany*

PROF. H. C. UREY, For. Mem. R.S. *The Enrico Fermi Institute for Nuclear Studies, University of Chicago, Illinois, U.S.A.*

DR. JOHN VERHOOGEN *Department of Geology, University of California, Berkeley, California, U.S.A.*

PROF. A. P. VINOGRADOV *The Academy of Sciences of the U.S.S.R., Moscow, U.S.S.R.*

PROF. L. R. WAGER, F.R.S. *Department of Geology and Mineralogy, The University, Oxford, England*

PROF. F. E. WICKMAN *Naturhistoriska Riksmuseets, Mineralogiska Avdelning, Stockholm 50, Sweden*

I. GENERAL

1. Papers on geochemistry should be submitted to the editors for the appropriate country or language (*Papers on cosmochemistry should be sent to Prof. F. A. Paneth, F.R.S.*). Papers submitted for publication will naturally be judged from the standpoint of scientific originality and novelty. Technical details of apparatus used in scientific investigation can, however, be presented in brief notes. Critical comments or preliminary results requiring early publication should be submitted as "Letters to the Editors." Where possible, letters should be confined to 500 words. The preparation of progress reports and review articles will be invited by the Editors from time to time. The journal appears as independent and complete numbers, which are combined into volumes of about 300 pages.

2. Only papers which have not been previously published will be accepted. Authors must agree not to publish elsewhere a paper submitted to and accepted by *Geochimica et Cosmochimica Acta*.

3. Fifty reprints of each paper are provided free. Additional copies can be purchased if ordered at the time the first proofs are returned. A reprint order form will accompany first proofs.

II. SCRIPT REQUIREMENTS

1. Script must be written in one of the three official languages—English, French, or German.

2. The script should be typed (not a carbon copy). The text must be ready for printing and should be carefully checked for errors. Authors will receive proofs for correction.

3. Illustrations should accompany the script, mounted on separate sheets. Line diagrams that require to be redrawn should include all relevant details. Half-tone illustrations should be restricted to the minimum necessary. Photographs should be enlarged sufficiently to permit their clear reproduction, and if words or numbers appear on them, two copies should be sent, one clearly printed and the other without inscription. All illustrations should be provided with descriptive legends, which should be given on a separate sheet.

4. References in the text should be given by quoting the author's name and year of publication, i.e. AHRENS (1952). **Full references should be listed at the end of each paper, in alphabetical order, in the following manner:**

AHRENS L. H. (1952) *Geochim. et Cosmochim. Acta* **2**, 168.

and should include the standard abbreviated title of the journal, year, volume, number and page number.

5. The text of articles submitted should be concise and in a readily understandable style. The technical description of the methods used should only be given in detail when such methods are new. The essential contents of each paper should be briefly recapitulated in an abstract in English. Such an abstract may, however, be submitted by the author in the language of the original typescript for translation into English by the Editorial staff.

6. To conserve space, authors are requested to mark less important portions of the paper (such as description of methods, record of experimental results, etc.) for printing in smaller type.
